## Ubiquitous ICT City

# What is u-City?

u-City(ubiquitous computing city) is the "**Korea's 21C ICT mediated City**", in which advanced ICT infra and ubiquitous information services are intrageted into the city space providing high convience and quility for everyday city life, highly secured and well managed city environment, and creation of new business.

**Fostering the u-City project as korea's future ICT Strategy**

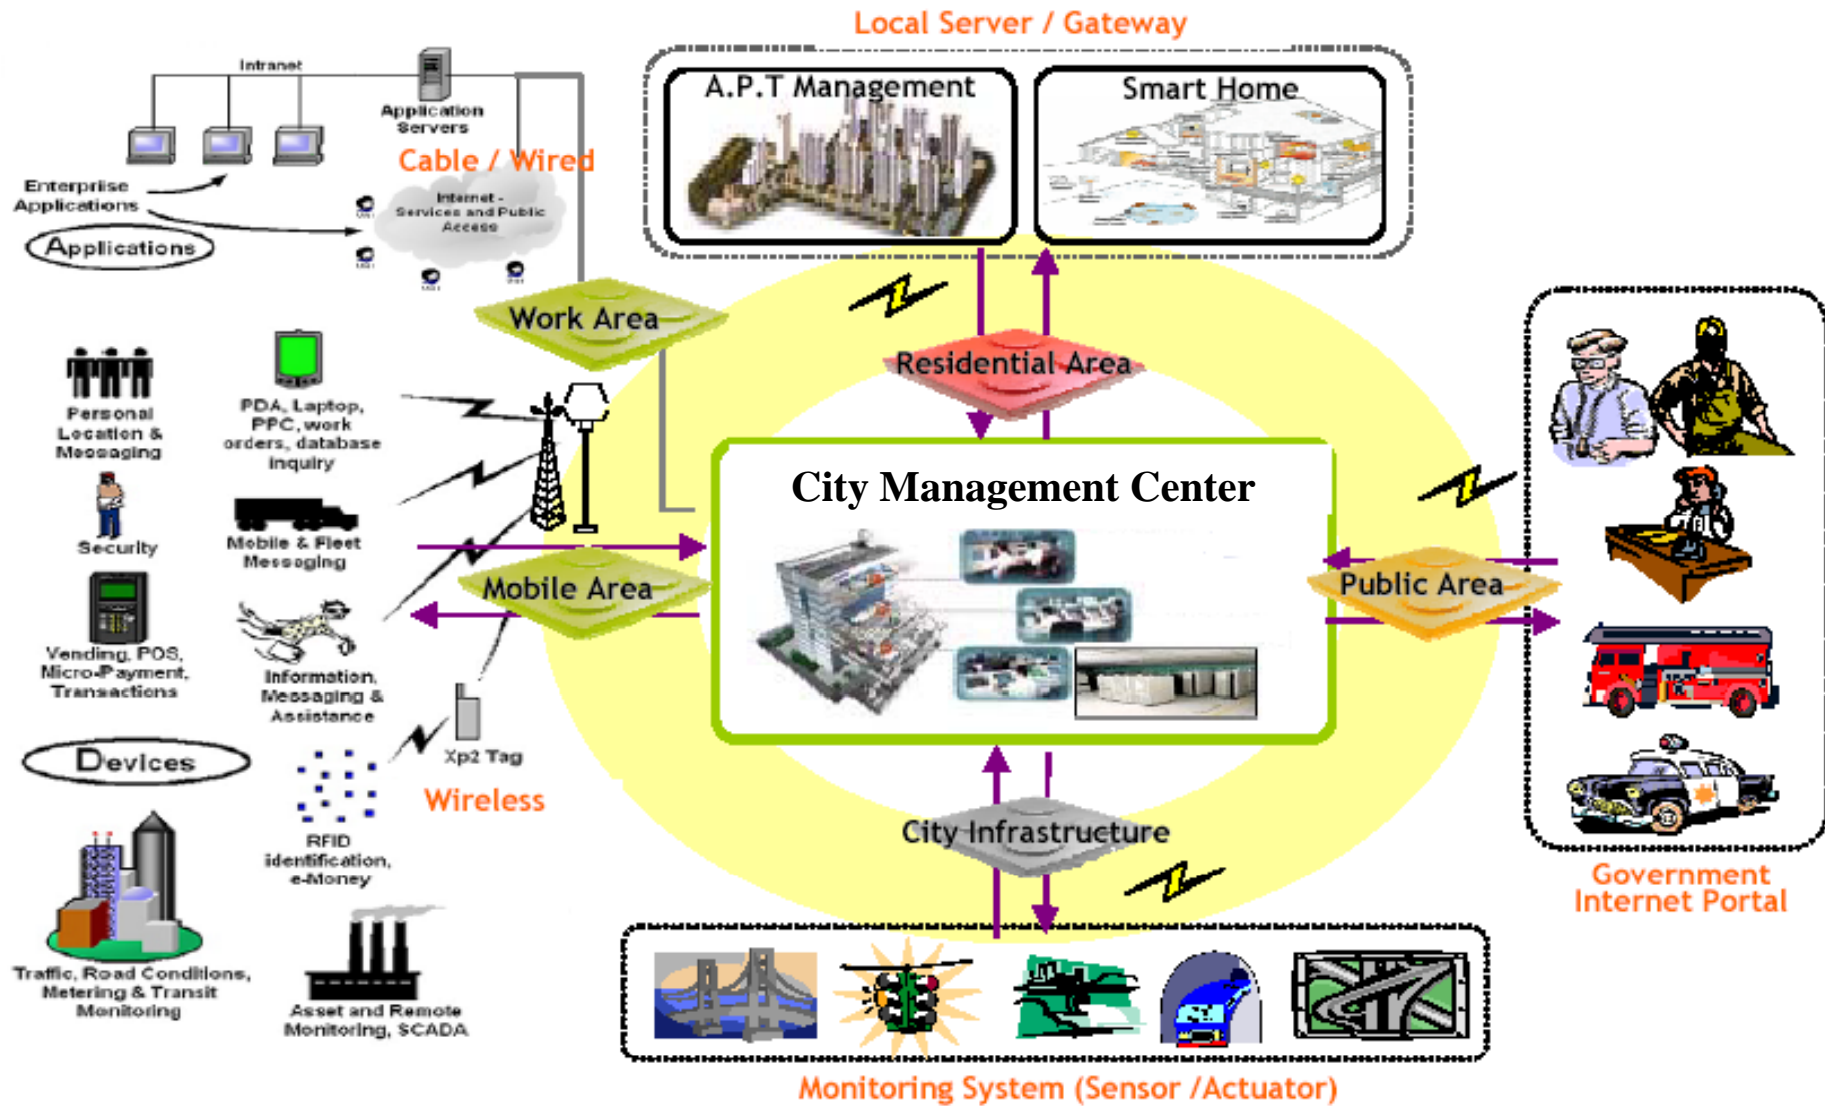

**Ubiquitous information services based on  
advanced ICT infra create new city values**

**Considering the ICT infra and services at the  
initial stage of city development**

**Concentrating the full effort of allied industries, academics,  
government and civil experts for the development of u-City**

# **u-City Forum**

**u-City is for creating ICT converged construction industries and securing the growth phase of ICT industry by maximizing the synergy effect between the world top level ICT infrastructure and the most active city construction industry in Korea.**

**The u-City Forum is a non-profit organization fostering the u-City proliferation project as a Korea's future economic growth strategy.**

**The main goal of the u-City Forum is to concentrate the full effort of allied industry, government and civil experts for the development of u-City application service models and related technology.**

**The major members of the forum are high-tech heavyweights such as KT, SKT, Samsung, LG, government agencies including the NCA, MIC and Ministry of Construction and Transportation, and city developers such as the Korea Land Corp. and Korea Housing Corp.**

# Profile

**Dr. Geunho Lee is a senior research fellow at u-City Forum and a Professor at SCH Univ. in the field of pervasive computing and communications. He is also a co-founder and CEO of UPIENCE Inc., which is a start-up for u-City business development consulting and solutions.**

**After his Ph.D. from the Johns Hopkins University, he was in the field of ICT for 10 years working in several government organizations, small to large companies, and university research centers.**

**Recent his activities were for u-City (ubiquitous computing city) promotion in Korea by consulting government and industry for R&D, business strategy and industry policy. He is a well known speaker in major conferences related to Mobile Com., RFID, Wireless Sensors, and ubiquitous computing. He published more than 50 articles and several books including Korean translation of RFID Handbook, UMTS & Mobile Computing and Pervasive Computing Handbook.**

**He was a senior advisor at Samsung Techwin, CJ Systems, and KT, research fellow at Korea Electronic Payment Industry Association, visiting professor at Korea Polytech University, R&D director at Korea Wireless Networks Inc., research officer at Ministry of Information & Communication, and visiting scholar at Georgia Institute of Technology.**

**His career covers ICT regulation & industrial policy development, standardization, R&D, R&D planning, techno-business strategic planning, technology valuation, and business development.**
